

GEATAN GSO

Chemical Nature:	substitution synthetic tanning
Active Substance:	approx. 95%
pH (10%):	approx. 5,0
Ionic Charge:	anionic
Aspect:	powder
Light Fastness:	very good
Utilization:	all types of retanning

PROPERTIES

GEATAN GSO is a substitution synthetic tanning developed to be used in all types of retanning, in chrome leathers as well as vegetable tanning leather. It can also be used as auxiliary tanning in vegetable tanning dispersions. Due to its compositions, it presents whitening power, consequently, it helps the equalization and leveling power of dyeing. Used in natural leathers, the tint results whitened. Due to this characteristic, when used as leather tanning auxiliary with vegetable tannins, provides a very light tint and with a very fine porosity. GEATAN GSO possesses excellent dispersing action. Therefore, it acts as retanning auxiliary favoring the penetration of the other retanning agents such as resins, synthetic and vegetable tannins. GEATAN GSO has average filling power and result good softness leathers. It operated well combined with other resinous tanning, resins and vegetable agents. Due to its chemical nature, it reacts well with the leather fibers, providing good sandpapering result.
