

## **GEATAN ML**

<b>Chemical Nature:</b>	mix of synthetic tannins
<b>Active Substance:</b>	approx. 90%
<b>pH (10%):</b>	approx. 8,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	yellowish white powder
<b>Utilization:</b>	retanning agent of general use

### **PROPERTIES**

---

GEATAN ML is a synthetic tannin with low formaldehyde content that imparts good filling, firm grain and medium softness. GEATAN ML has an ideal filling capacity and provides good dyeing evenness without reducing colour yield. Due to its chemical nature, it produces fine pores and optimal distribution of all the other products applied. GEATAN ML may be used on all kinds of articles including semi chrome leather, nobuck, napas, leather for footwear and automotive and furniture upholstery. It may be applied either as an only product or combined with other resinous and vegetable tannins. It provides good UV light fastness as well as resistance to aging.
