

GEALUX FINISH WP

Chemical Nature:	combination of low hydrophobic waxes and fatliquors for hot application
Active Substance:	approx. 98%
Melting Point:	approx. 60°C
Ionic Charge:	non ionic
Aspect:	yellowish solid
Utilization:	crazy horse type leathers with pull up effect

PROPERTIES

GEALUX FINISH WP is a wax developed to give pull up effect on leathers. Due to its chemical nature, it has little affinity with water and polar solvents. Therefore, it is recommended for waterproof leathers when semi-finished. Due to that, GEALUX FINISH WP does not influence the waterproofing of finished leathers. Its application is recommended at 85°C in thermo dot machines, with loads between 80 to 120 g/m², according to the final product desired.
