

## **GEABIND 1708**

<b>Chemical Nature:</b>	hard casein
<b>Active Substance:</b>	approx. 10%
<b>pH:</b>	approx. 9,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	translucent liquid
<b>Utilization:</b>	top coats

### **PROPERTIES**

---

GEABIND 1708 is made from special caseins, without plasticizers, which form a very hard, transparent and glossy film. Due to its hard characteristics, GEABIND 1708 can be used for top coats that will be glazed or polished with felt or stone. Another indication is for hard finishing coats that require a crack look. It is recommended to combine GEABIND 1708 with softer caseins of the GEABIND range to obtain more flexible films.
