

## **GEATOR RWO**

<b>Chemical Nature:</b>	polymeric dispersion
<b>Solid Contents:</b>	approx. 21%
<b>pH:</b>	approx. 4,0
<b>Aspect:</b>	beige liquid
<b>Utilization:</b>	water and oil repellence

### **PROPERTIES**

---

GEATOR RWO has been especially formulated to be used in finishing requiring water and oil repellence. Its application is recommended on articles that require high values in wet friction and crocking tests. Between 100-150/kg GEATOR RWO should be used in top paints. It may also be simply diluted in water and applied with spray-gun. In order to maximise the performance of GEATOR RWO as water and oil repellent, it is recommended to wait 24 hours from application. GEATOR RWO is compatible with resins, waxes and other finishing auxiliaries.
