

## **GEOFAT GSN**

<b>Chemical Nature:</b>	synthetic oil
<b>Active Substance:</b>	approx. 44%
<b>pH:</b>	approx. 6,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	yellowish viscous liquid
<b>Light Fastness:</b>	excellent
<b>Utilization:</b>	tanning and retanning fatliquor

### **PROPERTIES**

---

GEOFAT GSN is a synthetic fatliquor recommended for the protection and softening of leathers in different stages. Its chemical composition gives protection and lubrication to the leather fibers, both on chrome or other kind of tanning.

For retanning, GEOFAT GSN can be used in several process stages, such as in acid washings, re-chroming, during the addition of other retanning agents, or also combined in the main fatliquoring. Using GEOFAT GSN in tanning stage, it is recommended to apply from 0.5 up to 1% over the pickled weight.

In the retanning stage it can be used in any quantity, depending of the desired effect.
