

GEATEN BIO

Chemical Nature:	combination of NPE free emulsifiers.
pH (1:10):	approx. 7,0
Active Substance:	approx. 27% colorless liquid stable
Ionic Charge:	non ionic
Aspect:	transparent liquid
Stability to Electrolytes:	good
Utilization:	all kind of articles

PROPERTIES

GEATEN BIO is a degreasing agent with excellent properties to solubilize different fats present in the different stages of leather production. It can be used in the steps of soaking, liming, bating, pickle, tanning and retanning. The usage of GEATEN BIO at the beginning of the retanning process helps to remove the fats and re-humidify the hides, allowing all subsequent processes to have a better performance.
