<b>Active Substance:</b>	approx. 96%
<b>Ionic Charge:</b>	non-ionic
<b>Aspect:</b>	chestnut color liquid
<b>Utilization:</b>	finishes with a very fatty surface touch

### **PROPERTIES**

---

GEOFAT FINISH BMG is finishing oil used to provide a very fatty touch. It can be used pure or in combination with GEALUX FINISH PD, WP, WS or B23 waxes of the type. Besides leaving the surface fatty, it darkens it and gives a good effect of pull-up. It must be applied in thermodot machines heated to 45oC. After its application it is recommended to allow the leathers to rest for at least 6 hours before following to the next operation.
