

## **GEATAN TGR**

<b>Chemical Nature:</b>	vegetable tannins
<b>Active Substance:</b>	approx. 95%
<b>pH (1:10):</b>	approx. 4,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	brown powder
<b>Utilization:</b>	tanning and retanning

### **PROPERTIES**

---

GEATAN TGR is a vegetable pyrogalllic tannin modified with synthetic components. It may be used both in tanning and retanning. In retanning, it is used on vegetable and chrome leather. On purely vegetable leather, GEATAN TGR imparts compaction, softness, firm grain and light shades. When used as a retanning agent for chrome leather, GEATAN TGR produces compact, non-elastic articles with firm grain, that is, typical characteristics of vegetable-tanned leather. It is compatible with all other vegetable, synthetic and resinous tannins. It may be used on all sorts of articles such as leather for footwear, leathergoods and upholstery. It is recommended to apply between 6 and 10% calculated on the weight of the shaved pelts together with the other retanning agents applied.
