

GEOFAT W 77

Chemical Nature:	combination of vegetable and animal oils
Active Substance:	approx. 55%
pH:	approx. 7,0
Ionic Charge:	anionic
Aspect:	milky yellow liquid
Utilization:	fatliquoring of vegetable-tanned leather, especially for soles and welting

PROPERTIES

GEOFAT W 77 is a fatliquor especially formulated for vegetable-tanned leather. Its balanced composition provides the essential characteristics of such articles, for example, inner and outer lubrication. Leather that has been fatliquored with GEOFAT W 77 has a soft cross section as well as smooth, protected grain. Due to its composition, it helps reduce water absorption and provides good snuffing effect. It also lightens the shade of the surface of the leather and produces fine, very tight pores. Another very important benefit provided by GEOFAT W 77 is that it shields the leather from the friction exerted in the tanning and fatliquoring processes thus preserving the integrity of the grain. Because it is a complete combination, GEOFAT W 77 may be used as an only fatliquor both on sole and welting leather. It is recommended to apply approximately 3% GEOFAT W 77 on sole leather and between 7 and 9% on welting leather.
