

GEALUX FINISH BWA

Chemical Nature:	combination of waxes and oils with low hydrophilicity for hot application
Active Substance:	approx. 98%
Melting Point:	approx. 60°C
Ionic Charge:	non ionic
Aspect:	yellowish solid
Utilization:	leather with "crazy horse" type pull up effects

PROPERTIES

GEALUX FINISH BWA is a wax that provides high darkening in "Crazy Horse" and Pull Up type. It has an average hardness and can be used on different types of articles, both in firm hides and beaten. It should be applied in machines heated to at least 70°C and dried in tunnels at temperatures of 90°C. It can be used both pure and combined with the GEOFAT line depending on the hardness and the darkening effect desired. A high and uniform darkening effect can be obtained by polishing the leather on felt rollers. In addition to the attributes mentioned above, another characteristic of GEALUX FINISH BWA is that it does not emphasize natural defects in the leather.
