

## **GEATEN DSP**

<b>Chemical Nature:</b>	vegetable organic compound
<b>pH (10%):</b>	approx. 8,5
<b>Aspect:</b>	white powder
<b>Utilization:</b>	slip agent

### **PROPERTIES**

---

GEATEN DSP is a slip agent which reduces friction between the skins avoiding winding and nodes formation into the drum, contributing in this way to reduce losses by tearing. The usage of GEATEN DSP for liming and tanning processes does not cause any damage to the grain, while leaving the pores wide and open. GEATEN DSP provides an uniform dispersion of the auxiliaries added on the successive stages such as liming, tanning, retanning, dyeing and fatliquoring. Its usage amount is indicated at 0.1% to 0.4% in liming and tanning and 0.1% in retaning, dyeing and fatliquoring.
