

GEATAN DX

Chemical Nature:	tannin of dicyandine base
Active Substance:	approx. 96%
pH (10%):	approx. 8,0
Ionic Charge:	anionic
Aspect:	white powder
Light Fastness:	good
Utilization:	retanning agent for filling with selective action

PROPERTIES

GEATAN DX is a tannin that gives good filling and very firm grain to leathers. GEATAN DX helps to level and equalize the dyeing, without harming the dye-stuff yield. Presents optimal aptitude to scouring, and is indicated for all types of chrome or vegetable retanned leathers. GEATAN DX can be used together with other tannins, synthetic or vegetable ones, and can also be combined with the protein filler GEATAN BG.
