

GEOTAN AD/75

Chemical Nature:	phosphonium salt
pH:	approx. 3,0
Aspect:	transparent liquid
Utilization:	tanning agent for chrome free leathers

PROPERTIES

GEOTAN AD/75 belongs to new class of tanning agents based on phosphoric salts. GEOTAN AD/75 can be used in several solutions and more just like:

- Pretanning agent
- Tanning agent
- Fixing agent for dyes
- Agent in order to improve the exhaustion of chrome

With GEOTAN AD/75 is possible to obtain wet-white with a shrinking temperature of approximately 80°C, which can be easily shaved, with an excellent bleaching. The percentage of residual formaldehyde in the leather after proper washings is normally less than 10 ppm.
