

GEOFAT B 100

Chemical Nature:	triglycerides-based refined oil
Active Substance:	approx. 100%
Aspect:	light chestnut liquid of medium viscosity
Freezing Point:	0°C to 3°C
Utilization:	used as auxiliary oil in the composition of fatliquors

PROPERTIES

GEOFAT B 100 is a pure and refined natural-based oil. Its use is recommended as auxiliary oil in the main fatliquoring or even combined with cationic oils at the end of the Retanning. Used at the end of the Retanning, it provides better results of grain rupture to leathers and, together with the main fatliquoring, higher tensile strength. Its surface action on leathers provides a very agreeable and silky touch. Whenever used in vegetalized articles, contributes to the increase of reactivity and, in forced dried articles operates in the protection against grain rupture.
