<b>Active Substance:</b>	approx. 21%
<b>pH:</b>	approx. 8,5
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	beige liquid
<b>Utilization:</b>	leather with pull-up effect

### **PROPERTIES**

---

GEALUX 2030 has been developed on the basis of waxes and paraffins to achieve the darkening effect of “pull up”. GEALUX 2030 may be applied on buffed and full grain, while checking the penetration of this product on certain kinds of retanning. It may be applied either neat or combined with other waxes and oils in roller coating or spray-gun systems. After application, it is recommended to let the pelts rest before being subjected to the application of smooth plate, dull plate, embossing or polishing in order to achieve the darkening effect.
