PROPERTIES

GEATAN BG is an organic-protein filler specially developed for eliminating the negative effects of lack of dermal substance in leather bellies and flanks. GEATAN BG can be used in any kind of article, whether white leather, nappas in general, semi-chrome or vegetal leathers, such as bovines, goat and calfskins. GEATAN BG does not interfere negatively in the leather buffing, neither in the finish anchoring of any type. For the best result with GEATAN BG, it is recommended to add the product in power form 20 minutes before introducing the main fat liquoring, in a 60°C float.
