

## **GEATAN FC**

<b>Chemical Nature:</b>	syntans and organic salts condensation with retanning and neutralizing power
<b>Active Substance:</b>	approx. 96%
<b>pH (10%):</b>	approx. 6,5
<b>Ionic Charge:</b>	slightly anionic
<b>Aspect:</b>	dark beige powder
<b>Light fastness:</b>	medium
<b>Utilization:</b>	neutralization of all types of leathers

### **PROPERTIES**

---

GEATAN FC is a neutralizing and retanning tannin with optimal neutralization action. Due to its chemical nature it operates in a uniform and deep form, not increasing the pH too much. Besides neutralizing, its retanning power provides advantages on the conventional neutralizers. These are: fuller leathers, firmer grain, uniform touch, and standardization of the retanning agents and fatliquors penetration. GEATAN FC is recommended for all types of articles, particularly for leathers demanding a complete neutralization with a low pH. It is very efficient in neutralizing chrome-vegetable mixed leathers as it favors the vegetable retanning agents penetration. It is advised to use a quantity from 1.0 up to 2.5% on the shaved weight. It can be used alone or combined with GEATAN NT.
