

GEALAC WL

Chemical Nature:	aqueous emulsion of nitrocellulose lacquer
Active Substance:	approx. 11%
pH (10%):	approx. 7,0
Aspect:	yellowish white liquid
Utilization:	intermediary and top finishing coats

PROPERTIES

GEALAC WL is a nitro emulsion that dilutes in water. It imparts a pleasant, dry surface feel with medium-hard, shiny film. GEALAC WL provides very good resistance to friction as well as good behaviour to dry milling. It is, therefore, recommended as an intermediary fixation agent or as a top coat with very good features. After dilution, apply GEALAC WL with gun in the approximate amount of 4 – 6 g / ft².
