

## **GEAPUR FQ**

<b>Chemical Nature:</b>	water-based aliphatic polyurethane
<b>Active Substance:</b>	approx. 16%
<b>pH:</b>	approx. 8,0
<b>Ionic Charge:</b>	anionic
<b>Film Hardness:</b>	soft
<b>Film Transparency:</b>	clear
<b>Aspect:</b>	clear liquid
<b>Utilization:</b>	layer adhesion and soft coverage

### **PROPERTIES**

---

GEAPUR FQ is a small particle soft polyurethane providing excellent adhesion on the fibres of the leather. GEAPUR FQ is used in coverage paints where it imparts flexibility and adhesion between layers. In this case, it is used jointly with other acrylic dispersions. It forms a shiny, very clear film with natural aspect. This is why it is especially recommended for protein-natural finishes in combination with acrylics and caseins thus preserving the natural look of the leather. Using GEAPUR FQ is also recommended for adhesion enhancing in any kind of leather with anchoring issues.
