

GEAGROUND POLISH

Chemical Nature:	combination of binders, waxes, proteins and special oils
Active Substance:	approx. 18,5%
pH:	approx. 7,5
Ionic Charge:	anionic
Aspect:	pasty yellowish solution
Utilization:	finishes that require levelling off, resistance to polishing and intense shine

PROPERTIES

GEAGROUND POLISH has been especially formulated for light finishes that require optimal levelling off, high resistance to polishing and intense, natural shine. GEAGROUND POLISH is extremely reactive to heat, providing burnishing effect once polished even when using pigment in the combination. Due to the thermoset character of its binders, the more it is buffed, the shinier it will get. To achieve the effect described herein, apply 350 to 400 parts of GEAGROUND POLISH with up to 80 parts of pigment topped up with water.
