

GEATAN 1204

Chemical Nature:	phenol syntan combined with natural extract pyrocatechinic condensation based
Active Substance:	approx. 45%
pH:	approx. 5,0
Ionic Charge:	anionic
Aspect:	dark chestnut liquid
Light Fastness:	medium
Utilization:	retanning of all types of leather

PROPERTIES

GEATAN 1204 is a substitution tannin with excellent dispersing action on vegetable, resinous Retanning agents, and dyestuff. Being made of very low astringency and slightly acid reaction products, GEATAN 1204 is recommended for use before other Retanning agents, in order to decrease the subsequent products' reactivity. Due to this characteristic, GEATAN 1204 notably contributes for the obtainment of small pores and a smooth grain. Its action has surface dyeing equalization effect, and helps the dyestuff crossing. The dyeing presents good intensity in the entire cross-section. GEATAN 1204 can be used combined with other tannins producing full leathers, of agreeable touch and excellent buffing capacity. In order to achieve reactivity effect, it is recommended to use it at the end of retanning, combined with GEOFAT 1450, this application is highly indicated for calf skins, crossbreeds and goat skins, which will receive a protein-natural finish.
