

GEATOR H

Chemical Nature:	water-based aliphatic polyol
Solid Contents:	approx. 75%
pH:	approx. 6,5
Aspect:	colourless to slightly yellowish liquid
Utilization:	used to help preserve leather moisture

PROPERTIES

GEATOR H is an additive especially developed to retain moisture in leather. The hygroscopic character of its composition helps minimise problems deriving from excessive drying and low relative air humidity. It is recommended to use this product in tanning and retanning processes as well as in dry leather reconditioning. In retanning, it is used in the fatliquoring operation when between 1% and 2% GEATOR H calculated on the weight of the shaved pelts is added to the float.
