

## **GEOFAT CSL/P**

<b>Chemical Nature:</b>	combination of modified natural oils with synthetic softeners
<b>Active Substance:</b>	approx. 40%
<b>pH:</b>	approx. 6,0
<b>Ionic Charge:</b>	anionic
<b>Light Fastness:</b>	good
<b>Aspect:</b>	viscous yellow liquid
<b>Utilization:</b>	napa-like leathers, garment and upholstery leather, floaters and suede

### **PROPERTIES**

---

GEOFAT CSL/P is a natural/synthetic degreasing agent that has been especially developed for leathers that require high softness and lightness levels. Its balanced composition makes it possible to penetrate the whole thickness of the leather. Even when it is used in large quantities, GEOFAT CSL/P does not adversely interfere on the weight of the leather. It may be applied at different stages of the retanning process either together with synthetic or vegetable retanning agents or combined with other fatliquors. Besides softness and lightness, GEOFAT CSL/P also provides a silky and pleasant surface feel to leather. If applied to buffed leather, it does not affect the buffing and provides a velvety feel.

The percentage to be applied will depend on the intended degree of softness and may vary from 3 to 15% calculated on the weight of the shaved pelts. It is not recommended to use this product together with chromium or aluminium salts as precipitation may occur.
