

GEATEN AF

Chemical Nature:	quaternary amine compound
Solids Content:	approx. 30%
pH (1:5):	approx. 6,5
Ionic Charge:	cationic
Aspect:	yellowish liquid
Stability to Electrolytes:	excellent
Light Fastness:	excellent
Utilization:	fixing and intensifier agent

PROPERTIES

GEATEN AF is a high performance fixation agent for anionic dyestuff. Developed from high quality components, it is recommended for the fixation and intensification of anionic dyestuff. Its cationic properties reacts with the leather surface, enhancing the reaction and affinity with the dyestuff. It is recommended to use GEATEN AF in the dyestuff topping applications. It is applied in a new float, 30 minutes before the addition of the dyestuff, in percentages from 2 to 3% over the shaved weight. Because it intensifies and gives very glossy dyeing, GEATEN AF is highly recommended as a strong fixation agent and inhibitor of dyestuff migration when exposed to sweat and water.
