

GEATAN CR

Chemical Nature:	product of the combination of chrome salts, condensed sytan and complexing salts
Active Substance:	approx. 95%
pH (10%):	approx. 5,0
Ionic Charge:	slightly anionic
Chrome Oxide (Cr₂O₃):	approx. 14%
Light Fastness:	excellent
Utilization:	all types of retanning

PROPERTIES

GEATAN CR is a retanning tannin of wide application in chrome retannings. Due to its balanced composition it produces leathers with uniform characteristics as to the softness, filling, grain firmness and dyeing equalization aspects. Besides a strong retanning action, GEATAN CR operates slowly as a neutralizer and self-complexating safety agent of its mineral components. Its application can be made at the beginning of the retanning or together with other retannings, helping its fixation. For having optimal light fastness it can be used in white retannings.
