

GEALUX M 83

Chemical Nature:	effect wax in aqueous emulsion
Active Substance:	approx. 15%
Ionic Charge:	anionic
Aspect:	brownish liquid
Utilization:	special articles

PROPERTIES

GEALUX M 83 is a balanced combination of medium-hard natural and synthetic waxes for the purpose of providing special characteristics on corrected grain leathers. It gives an aged effect, normally applied by spray gun or roller coater machines. After the application, the resting time must be respected followed by the hot plate operation that completes the wax melting. GEALUX M 83 gives a dark effect, inclusive helping to hide the leather defects.
