

## **GEATAN FR LIQ**

<b>Chemical Nature:</b>	diyidroxi diphenil sulphonic based synthetic tanning
<b>Active Substance:</b>	approx. 40%
<b>pH (10%):</b>	approx. 3,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	chestnut reddish liquid
<b>Light Fastness:</b>	excellent
<b>Utilization:</b>	all types of retanning

### **PROPERTIES**

---

GEATAN FR Liq. Is a synthetic tannin of dihydroxi diphenil sulfonic condensation. Produces full leathers, of good softness, and firm grain. It is recommended as retanning agent or as whitening agent for all types of chrome or vegetable tanned leathers. Combined with vegetable tannins, in special with GEATAN FR Liq., produced compact and good firmness grain leathers. Used in colored leathers, produces clean and well equalized dyeing. Thanks to its composition, presents good resistant properties to ageing and U.V. rays enabling it to be used in white leathers and light tints leathers. It provides the leathers good capacity to sandpapering and presents a good behavior to drumming, resulting a well leveled and designed break. Due to its characteristics, its use is recommended to all types of soft articles, nappas, bated or not. Examples: furniture upholstery, automotives, floaters, apparel nappa, purses leathers, and footwear nappa in general.
