

## **GEOTAN GTX**

<b>Chemical Nature:</b>	glutaraldehyde with additives
<b>pH:</b>	approx. 3,5
<b>Aspect:</b>	colourless liquid
<b>Utilization:</b>	all kinds of leather

### **PROPERTIES**

---

GEOTAN GTX is a glutaraldehyde-based tanning agent that has been modified with the purpose of improving its penetration into the leather. Its use is recommended on all stages of leather processing especially pre-tanning of chrome-free leather, such as the Wet-White, Chrome-Free and Bio Leather systems. When employed in pre-tanning, GEOTAN GTX shows excellent performance thanks to its strong tanning and penetrating powers into pickled pelts. Besides having very good shaving behaviour, this product also produces soft, full leathers with fine grain. When used in chrome leather retanning, it imparts softness, lightness and a pleasant feel. GEOTAN GTX must be diluted in water in the 1:5 ratio before application. In both pre-tanning and retanning it is recommended to apply between 2 and 4%, depending on the article being produced.
