

GEOTAN BP

Chemical Nature:	synthetic and natural polymer-based retanning agent
Active Substance:	approx. 28%
pH (10%):	approx. 6,0
Ionic Charge:	anionic
Aspect:	yellow to brown liquid
Utilization:	all types of retanning

PROPERTIES

GEOTAN BP is a mixture of synthetic and natural polymers that imparts excellent filling, good grain tightness, medium softness and good dyeing evenness to leather.

GEOTAN BP is very versatile and may be applied either at the beginning of the retanning process or together with the tannins, or in a new float at the beginning of the fatliquoring process. Due to its composition, GEOTAN BP reacts well to leather fibres resulting in excellent exhaustion.

GEOTAN BP contains a natural and renewable component which increases its biodegradability when compared to conventional resins.
