

GEATAN DHS

Chemical Nature:	di-hydroxide diphenil sulphone based synthetic tannin
Active Substance:	approx. 94%
pH (10%):	approx. 4,0
Ionic Charge:	anionic
Aspect:	light beige colored fine powder
Light Fastness:	excellent
Utilization:	general use retanning agent particularly recommended for obtaining white leathers

PROPERTIES

GEATAN DHS is a synthetic tannin of di-hydroxide diphenil sulphone condensation. Due to its characteristics, GEATAN DHS produces leathers with excellent filling, and good softness. Its use is recommended as a retanning agent or as a whitening agent for chrome and vegetable leathers. GEATAN DHS is particularly indicated for white and light colored leathers. It gives the leathers excellent properties of light fastness, and ageing resistance. It also gives an optimal whitening effect, produces fine, firm grain. GEATAN DHS is compatible with other vegetable or synthetic tannins.
