

GEAGROUND K 27

Chemical Nature:	combination of oils, waxes, and natural linking agents
Solids Content:	approx. 28%
pH:	approx. 7,5
Ionic Charge:	amphoteric
Aspect:	yellowish viscous solution
Utilization:	pre-bottom for natural articles

PROPERTIES

GEAGROUND K 27 is a pre-bottom used to improve the leveling of absorption of natural finishes. On "grain off" leathers, it seals the surface allowing the obtention of smooth, transparent and uniform finishes both on corrected and full grain leathers. Due to its amphoteric characteristics, it can be mixed with anionic and cationic products. GEAGROUND K 27 provides a very good upgrade when plated or polished after its application. Its balanced composition offers pleasant hand feeling and natural finishes, without compromises the adhesion.
